

Nodegoat-Workshop

Analyse and visualise Humanities data

Friday, January 19th, 2024

9:00-13:00

Basel

Learn how to use the web-based research environment NODEGOAT for your research. NODEGOAT allows scholars to build datasets based on their own data model and offers relational modes of analysis with spatial and chronological forms of contextualisation.

No prior knowledge is necessary for participation! **Please bring your laptop** and feel free to also bring your research questions and/or dataset to be used during the workshop. You can start your project prior to the workshop and attend the workshop to ask questions about your project: you can request a free account at www.nodegoat.net/requestaccount to get started.

The workshop will be held by Pim van Bree and Geert Kessels ([LAB1100](#)) in English.

This workshop is organised by the Swiss National Data and Service Center for the Humanities (DaSCH) and Research & Infrastructure Support (RISE) of the University of Basel.

Places are limited and will be allocated on a first-come-first-served basis. Please register [here](#) until January 8th, 2024.
